** QRT - JM1WBB **

It is a nightmare... Roke (Typhoon 15th) attacked my 2m array.
My 4XP32, all booms were broken and all vertical frame were
broken. I don't know now when I will be able to go back to EME.

** MS Propagation info from MMMonVHF for October **

This month the attention of meteor enthusiasts will be captured
by the return of Draconids meteor shower. In fact, several
Researchers have forecasted an Outburst of Draconids on October 8th
Even if no meteor storm is expected, there is a general consensus
that the evening UT hours of October 8 should produce ramarkable
Draconids activity. Many mathematical models predict the outburst
around 20h UT, but the ZHR level is hard to predict, though.
Usual Orionids shower and a good background of sporadic meteors
will ensure good opportunities for MS Dxing the rest of the month.
Have a look to shower predictions for October 2011 at our MMM
MS-Propagationpage: http://www.MMMonVHF/ms.php

** BIG GEOMAGNETIC STORM **

A strong geomagnetic storm is in progress following the impact
of a coronal mass ejection (CME) today, Sept. 26th, at approx.
12:15 UT. Analysts at the Goddard Space Weather Lab report a
"strong compression of Earth's magnetosphere" and the possibility
that satellites in geosynchronous orbit have been exposed to solar
wind plasma and magnetic fields. Mid- to high-latitude sky watchers
should be alert for auroras after nightfall. Observing tip:
The hours around local midnight are usually best for spotting
Northern and Southern Lights. Check http://spaceweather.com for
images and updates. SOURCE: http://spaceweather.com

** N7BHC arrived on PJ4 **

Hi all, FYI, I have moved to Bonaire (PJ4) a couple of days ago.
I'll be working here for many years with TWR (www.twr.org). I had
brought down a bunch of 6m, 2m, and 70cm gear. It will take a few
months to get settled into our house and the station and antennas
up, but I expect to have a nice station set up by the spring. 73s
